2022 Top Metal Builders

A year of rapid change and the labor shortage continues

By Paul Deffenbaugh
Editorial Director
Posted May 01, 2022

Do you have whiplash yet? For metal building contractors and erectors, 2021 must have been a year of sharp contrasts, highs and lows. For example, steel prices shot up in early May, then plummeted. Shot up again in July, then plummeted. And edged up again in October before dropping to a yearly low in late November.

Price, availability and demand for construction materials all fluctuated widely in 2021 (see the discussion on the biggest challenges below), but despite that, the top metal builders report increases in the average tonnage and square footage. In fact, by all measures, 2021 was a very strong year for the metal building industry when looking at the largest contractors.

Last year, we identified the largest erectors who made the lists so we could begin the process of separating contractors from erectors. This year, we asked submitters to identify as either a contractor or erector and we made two lists: the 100 largest metal building contractors and the 20 largest metal building erectors.

Because of this there are some anomalies in the reporting since we can't easily compare this year's list to previous lists. To help with that, in the charts below you will see comparisons for just contractors and then comparisons for the combined lists, but limited to the top 100 as we have in previous years.

Previous Reports

Note: In 2020, MCN changed the name to reflect the year the report was published rather than the year the data reflected, so there is no 2019 list.

2022 Top Metal Erectors by Square Footage

This map was made with Google My Maps. [Create your own.](#)

Those companies that used the online survey were forced to select either metal building contractor or metal building erector. But a few companies that submitted by form checked both boxes. There are a number of contractors in the industry who both self-perform and erect only for other companies. They are, by these awkward definitions, both contractors and erectors.

If that was the case, we put them in the contractor category. Our reasoning was a matter of consistency. Most of our respondents can't easily separate out the tonnage and square footage they did as contractors compared to erectors. While having those different responses will be helpful in looking at the industry overall, it's not easily figured within individual companies.

The Biggest Challenge

What a difference a year makes. The construction industry is notoriously slow to change, but in 2021 metal building contractors and erectors had to deal with more change than they had seen in the previous 10 years, including 2020 when the pandemic struck.

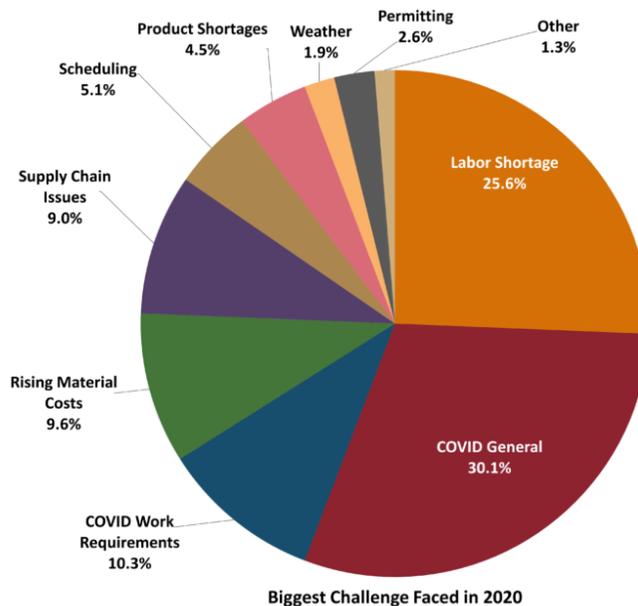

Last year, when we asked what the biggest challenges they faced in 2020 were, they reported general COVID issues (30.1%) and COVID work requirements (10.3%) were the most significant. The availability of labor continued to be a pressing issue that year with about a quarter of respondents saying it was hard to find skilled labor.

In our reporting on 2021 this year, we saw a wholesale shift in the kind of challenges contractors and erectors faced. Yes, the labor shortage still loomed large with a steady quarter of respondents saying it was a major challenge. Problems with material shortages increased with 5.1% of respondents saying it was a challenge in 2020, while 8.7% pointed to it as a challenge in 2021.

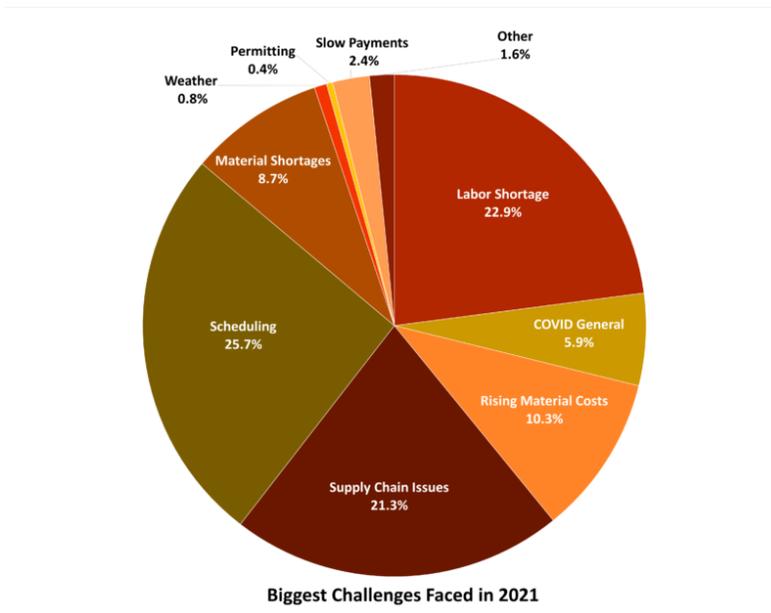

But the most significant changes came in supply chain issues and scheduling. Make no doubt that material shortages, rising material costs, scheduling issues and supply chain problems are all interconnected, but the supply chain and scheduling rose to the top. In 2020, contractors 9.6% of respondents reported supply chain issues as a problem, which increased to 21.3% last year.

Scheduling issues took on even greater importance in 2021. Of our respondents, 25.7% said they were facing scheduling problems, with almost all of those coming from longer lead times. That was compared to only 5.1% reporting that same kind of problem in 2020.

Weather struggles and permitting issues became slightly less problematic in 2021, but a new problem did arise in our reporting. 2.4% of contractors and erectors report slow payment for services (often from the general contractor) as becoming a challenge. This is nothing new in the construction industry, but that it rises up during a time of longer lead times and rising material costs can make managing cash flow in a contracting business extremely challenging.

The biggest challenges Top Metal Builders faced in 2020

The biggest challenges Top Metal Builders faced in 2021

Overview

Across the board, metal building contractors and erectors saw their businesses increase in 2021 compared to 2020. That's not surprising considering the start of the pandemic in 2020 forced a nearly industry-wide shutdown. The top 100 contractors saw a 13.1% increase in tonnage and 12.5% increase in square footage of metal building systems installed. The top 20 erectors saw slighter increases (3% for tonnage and 7.3% for square footage) but that may be because it's a smaller collection of companies and larger companies tend to average smaller increases year-over-year.

When we combined the lists and selected the top 100 contractors and erectors, we discovered similar increases across the board with the top 100 increasing tonnage by 9.2% and square footage by 12.1%.

Contractors List

Average Tonnage 2020: 1,562 tons

Average Tonnage 2021: 1,797.9 tons

Percent Increase: 13.1%

Average Square Footage 2020: 360,486 square feet

Average Square Footage 2021: 411,958 square feet

Percent Increase: 12.5%

Erectors List

Average Tonnage 2020: 4,185.8 tons

Average Tonnage 2021: 4,065.1 tons

Percent Increase: 3.0%

Average Square Footage 2020: 982,950 square feet

Average Square Footage 2021: 1,060,791 square feet

Percent Increase: 7.3%

Combined Top 100 of Contractors and Erectors Combined

Average Tonnage 2020: 2,299.3 tons

Average Tonnage 2021: 2,533.4 tons

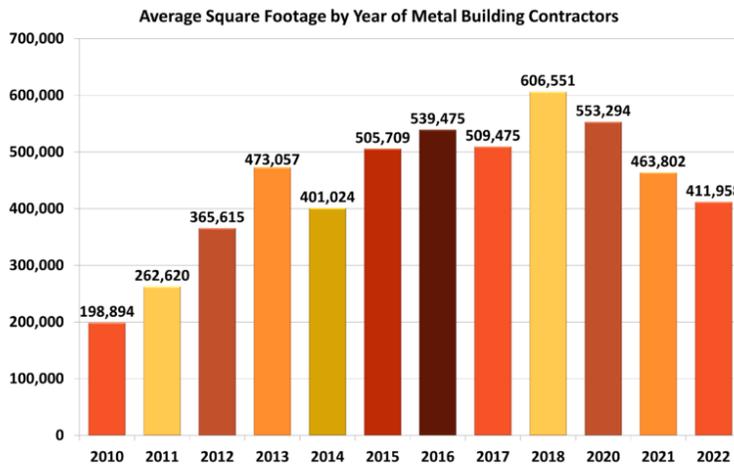

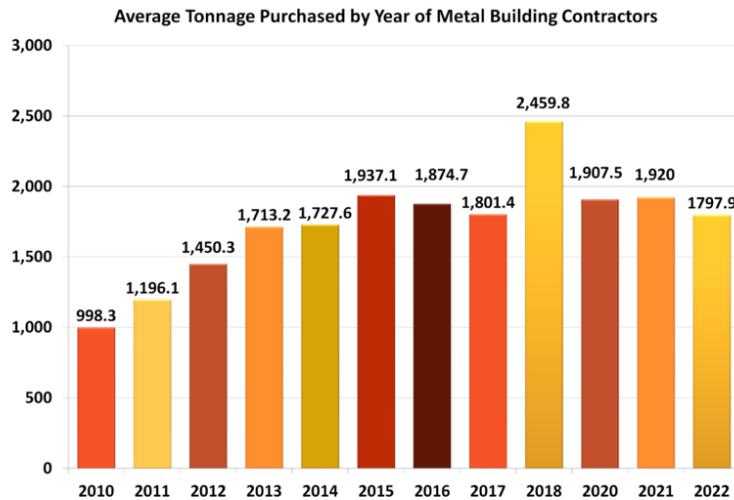

Percent Increase: 9.2%

Average Square Footage 2020: 602,688 square feet

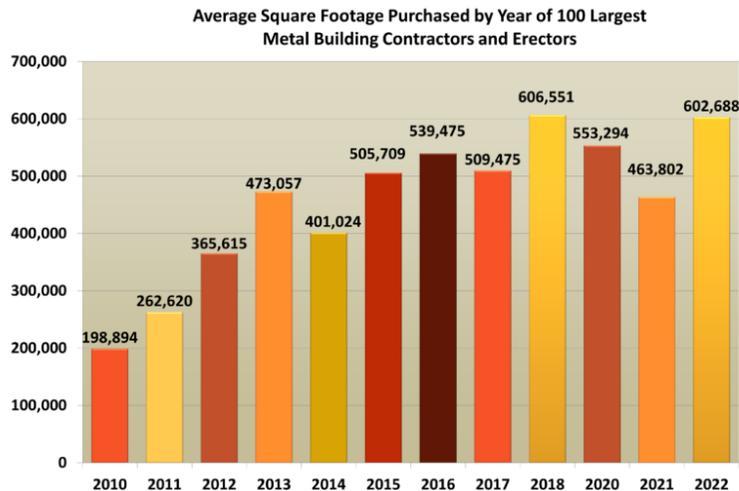

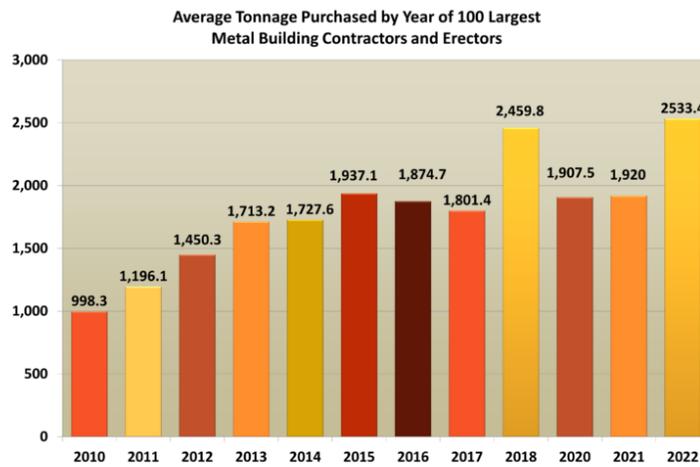

Average Square Footage 2021: 529,692 square feet

Percent Increase: 12.1%

Average Size

Over the last 12 years, both average square footage and tonnage reported by metal building contractors increased steadily until 2018 when a decline began. The decrease this year may be attributed to separating out the erectors from the contractors list.

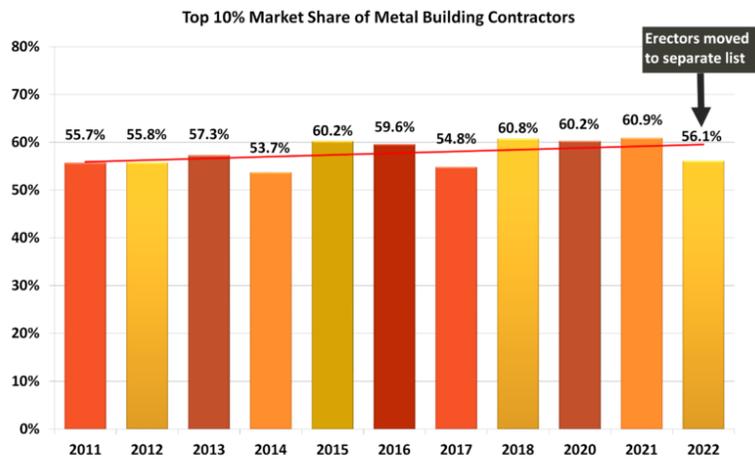

So, we combined the lists and selected the top 100 contractors and erectors. When that happens, there is a significant jump in total tonnage and square footage.

Market Share

In our reporting on the Top Metal Builders for the last couple of years, we have begun to show market share of the top 10%. Going back to 2011, there has been only a very slight increase in market share among the largest companies, except this year. That is probably attributed to placing the erectors on a separate list.

If we combine the contractor and erector lists and select the 100 largest firms by tonnage, we get numbers more comparable to previous years. In future years, we will be able to dig deeper into these numbers and track market share across two lists and the combined market.
